The global Microporous Silica Insulating Board market size is expected to reach \$ 652.9 million by 2029, rising at a market growth of 5.9% CAGR during the forecast period (2023-2029).

Microporous insulation is silica based material in the form of compacted powder or fibers with an average interconnecting pore size comparable to or below the mean free path of air molecules at standard atmospheric pressure. Microporous insulation may contain opacifiers to reduce the amount of radiant heat transmitted. This composition results in a material with exceptionally low thermal conductivity (lower than dormant air). Each board is individually encapsulated in polyethylene foil to make it resistant to moisture. It is also available in a flexible form with or without cloth encapsulation.

This report studies the global Microporous Silica Insulating Board production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Microporous Silica Insulating Board, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
