The basic principle of the micro-pulse aerosol lidar is to use the laser as the light source, the radar emits 532nm laser, and the receiving telescope collects the backscatter signal of the aerosol and dust storm particles to the laser. By receiving the 532nm depolarization signal, the echo intensity and depolarization characteristics are analyzed, the properties of particles in the atmosphere are analyzed, and the horizontal or vertical concentration profile information, extinction coefficient Depolarization ratio, boundary layer height, aerosol optical thickness, cloud information, etc.
