## Abstracts

The global Microreactor Technology market size is expected to reach \$ 958.5 million by 2029, rising at a market growth of 14.0% CAGR during the forecast period (2023-2029).

Asia Pacific is the largest market for Microreactor Technology with a market share of about 32%, followed by Europe and North America with a market share of both about 31%. Among these mature companies, Corning, Chemtrix, Little Things Factory, AM Technology and Soken Chemical & Engineering are the leading manufacturers in the global Microreactor Technology market, with approximately 70% market share. In terms of product, production use is the largest segment, with a share over 60%. And in terms of application, the largest application is specialty chemicals, followed by pharmaceuticals.

Microreactor technology is a continuous flow process based on plug flow reactors. It requires minimal volume of reagents while offering rapid dynamic responses and robustness. The system allows excellent temperature control and efficient mixing procedures. A Microreactor is a device in which chemical reactions take place in a confinement with typical lateral dimensions below 1 mm; the most typical form of such confinement are microchannels. Microreactors are studied in the field of micro process engineering, together with other devices (such as micro heat exchangers) in which physical processes occur. The microreactor is usually a continuous flow reactor (contrast with/to a batch reactor). Microreactors offer many advantages over conventional scale reactors, including vast improvements in energy efficiency, reaction speed and yield, safety, reliability, scalability, on-site/on-demand production, and a much finer degree of process control.
