According to our (Global Info Research) latest study, the global Microsatellites market size was valued at USD 1059.8 million in 2023 and is forecast to a readjusted size of USD 1326.1 million by 2030 with a CAGR of 3.3% during review period.

Small satellites are satellites of low mass and size, usually under 500 kg (1,100 lb). While all such satellites can be referred to as 'small', different classifications are used to categorize them based on mass. Satellites can be built small to reduce the large economic cost of launch vehicles and the costs associated with construction. Miniature satellites, especially in large numbers, may be more useful than fewer, larger ones for some purposes – for example, gathering of scientific data and radio relay.

Global Small Satellite key players include Lockheed Martin, Northrop Gruman, Raytheon, etc. Global top three manufacturers hold a share about 50%.

United States is the largest market, with a share over 70%, followed by Europe and China, both have a share about 25 percent.

In terms of product, Nanosatellite is the largest segment, with a share over 50%. And in terms of application, the largest application is National Security, followed by Commerce.
