According to our (Global Info Research) latest study, the global Microscope Digital Cameras market size was valued at USD 653.2 million in 2023 and is forecast to a readjusted size of USD 1051.8 million by 2030 with a CAGR of 7.0% during review period.

A digital microscope is a variation of a traditional optical microscope that uses optics and a digital camera to output an image to a monitor, sometimes by means of software running on a computer. A digital microscope often has its own in-built LED light source, and differs from an optical microscope in that there is no provision to observe the sample directly through an eyepiece. Since the image is focussed on the digital circuit the entire system is designed for the monitor image. The optics for the human eye are omitted.
