Polymer microspheres are obtained by the dropwise addition of a precipitant, containing a polymeric stabilizer, into a polymer solution, containing a polymeric stabilizer.

Polyethylene, polystyrene and expandable microspheres are the most common types of polymer microspheres.

SCOPE OF THE REPORT:

For industry structure analysis, the Microspheres Industry is concentrate. The top five producers account for about 73% of the revenue market in 2016. Regionally, North America is the biggest production and Consumption area of Microspheres, also the leader in the whole Microspheres market.

North America occupied 33.9% of the sales volume market in 2015. It is followed by Europe and APAC, which respectively have around 29% and 23% of the global total industry. Other countries have a small amount of sales volume.

For price trend analysis, a key variable in the performance of Microspheres producers is raw material costs, specifically the speed at which any increase can be passed through to customers.
