Abstracts

The global Microsilica market size is expected to reach \$ 438 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Microsilica (also known as silica fume) is an ultrafine powder collected as a by-product of silicon metal or ferrosilicon production, consisting primarily of amorphous silicon dioxide (SiO₂) with sub-micron spherical particles and extremely high surface area. In 2025, global microsilica sales reached approximately 1,500 kilotons with an average price of 200 US\$/ton.

Market growth for microsilica is primarily driven by increasing demand for high-performance concrete in infrastructure modernization, including bridges, tunnels, marine structures, and large industrial facilities that require superior strength, durability, and corrosion resistance. Supply is closely tied to upstream silicon and ferrosilicon smelting, while environmental regulations encouraging by-product utilization further support its adoption. In addition, low-carbon construction trends promote the use of supplementary cementitious materials to partially replace cement and reduce CO₂ emissions, and expanding applications in oil-well cementing, refractories, and repair materials are contributing to sustained demand for high-quality microsilica.

This report studies the global Microsilica production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Microsilica and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Microsilica that contribute to its increasing demand across
