According to our (Global Info Research) latest study, the global Microsurgical Instruments market size was valued at USD 2261.1 million in 2023 and is forecast to a readjusted size of USD 3423.7 million by 2030 with a CAGR of 6.1% during review period.

Microsurgical technique refers to that surgeons use fine microsurgical instruments and suture materials to perform fine surgery on small tissues with the help of the magnification of the operating microscope. Traditional open surgery causes great trauma and high risk to patients. With the technological progress in the fields of machinery, electronics and information, surgery is gradually developing towards the minimally invasive direction of less trauma, less pain and rapid recovery. Microsurgery is a minimally invasive form of surgery with the least trauma, which reduces the surgical incision to millimeter level.
