Abstracts

Microsurgical technique refers to that surgeons use fine microsurgical instruments and suture materials to perform fine surgery on small tissues with the help of the magnification of the operating microscope. Traditional open surgery causes great trauma and high risk to patients. With the technological progress in the fields of machinery, electronics and information, surgery is gradually developing towards the minimally invasive direction of less trauma, less pain and rapid recovery. Microsurgery is a minimally invasive form of surgery with the least trauma, which reduces the surgical incision to millimeter level.

Microsurgical instruments are medical instruments used in microsurgery. It mainly includes operating microscope, micro cutting tool, micro forceps, micro forceps and micro hemostatic clip, suture and microvascular stapler. It has been widely used in Ophthalmology, otorhinolaryngology, plastic surgery, orthopedics, cardiovascular, neurosurgery and other departments, and has a very good market prospect.
