## Abstracts

According to our (Global Info Research) latest study, the global Microtomes market size was valued at USD 37 million in 2023 and is forecast to a readjusted size of USD 47 million by 2030 with a CAGR of 3.4% during review period.

A microtome (from the Greek mikros, meaning 'small', and temnein, meaning 'to cut') is a tool used to cut extremely thin slices of material, known as sections. Important in science, microtomes are used in microscopy, allowing for the preparation of samples for observation under transmitted light or electron radiation. Microtomes use steel, glass, or diamond blades depending upon the specimen being sliced and the desired thickness of the sections being cut. Steel blades are used to prepare sections of animal or plant tissues for light microscopy histology. Glass knives are used to slice sections for light microscopy and to slice very thin sections for electron microscopy. Industrial grade diamond knives are used to slice hard materials such as bone, teeth and plant matter for both light microscopy and for electron microscopy. Gem quality diamond knives are used for slicing thin sections for electron microscopy.

Leica, Sakura, Thermo Fisher, Medite, Slee Medical, RMC Boeckeler, MICROS Austria, AGD Biomedicals, Alltion, Amos scientific, Bright Instrument, Diapath Spa, Histo Line Laboratories, Auxilab, Nanolytik, Orion Medic and S.M. Scientific are the key manufacturers of Microtomes. Leica is the leader of this industry with about 48% market shares.
