Microwave Assisted Therapy System is a new type of medical equipment that uses microwaves to treat various diseases, mainly utilizing the biological effects of microwaves for treatment. Microwave refers to electromagnetic waves with frequencies ranging from 300MHz to 300GHz, possessing optical, penetrative, and non ionizing properties. When microwave is irradiated on human tissue, it causes vibration and friction of water molecules in the tissue, thereby generating heat. This thermal effect can promote local blood circulation, enhance metabolism, improve immune function, and enhance local nutrition, thereby achieving the goal of treating diseases.
