Abstracts

According to our (Global Info Research) latest study, the global Microwave Band CW Radar market size was valued at US\$ 1461 million in 2025 and is forecast to a readjusted size of US\$ 2526 million by 2032 with a CAGR of 8.1% during review period.

In 2025, global production of microwave band continuous wave radar reached approximately 37.4 thousand units, based on an average market price of around US\$ 38,000 per unit. Industry gross profit margins generally ranged from 35% to 55%, reflecting value added from signal stability, frequency accuracy, and system-level integration capability. Global production capacity in 2025 was estimated at about 47.0 thousand units, indicating sufficient manufacturing capability to support expanding industrial and security applications.

Microwave band continuous wave radar is a radar system that transmits and receives continuous microwave signals to detect targets and measure parameters such as speed, distance variation, or motion presence. It is characterized by high sensitivity, simple structure, and strong anti-interference performance, making it suitable for motion detection and velocity measurement applications.

The industrial chain includes upstream microwave components, oscillators, antennas, RF circuits, and signal processing units. The midstream focuses on radar module assembly, frequency tuning, system calibration, and functional testing. Downstream applications mainly involve traffic monitoring, industrial automation, security systems, level measurement, and motion sensing equipment.
