According to our (Global Info Research) latest study, the global Microwave Monolithic Integrated Circuit (MMIC) market size was valued at USD 9274.4 million in 2023 and is forecast to a readjusted size of USD 13540 million by 2030 with a CAGR of 5.6% during review period.

MMIC is a type of integrated circuit (IC) device that operates at microwave frequencies (300 MHz to 300 GHz). MMICs contain active, passive, and interconnect components. These devices typically perform functions such as microwave mixing, power amplification, low-noise amplification, and high-frequency switching. Most of MMICs are fabricated on III-V compound substrates such as GaAs, InP, and GaN, silicon and SiGe MMICs are also becoming commonplace, especially where complex mixed signal systems need to be integrated on the same chip. MMICs are the components of choice for most of high-frequency applications. They offer several advantages over their discrete or hybrid counterparts, such as reduced size, low cost, and high reproducibility and repeatable performance.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-

time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
