## Abstracts

According to our (Global Info Research) latest study, the global Microwave Synthesis System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Microwave Synthesis System works by exposing the chemical reaction to an electric field at high pressure; this rapidly heats up the molecules through the movement generated by bipolar pole polarisation or ionic conduction. Due to the high pressure, the solvent can be heated above its standard boiling point.
