The microwave vehicle stopping system is a device that uses high-power microwave technology to perform non-lethal 'vehicle denial'. The microwave vehicle stopping system uses high-power electromagnetic waves that are directionally radiated to the suspect vehicle. After multi-dimensional electromagnetic coupling, it can interfere with the engine computer (ECU), ignition circuit, key sensors of the target car. The ignition signal disorder causes the vehicle engine to be unable to burn normally, thus The engine stalls and the vehicle loses power and then slows down until it stops.
