## Abstracts

The global Migraine-Specific Analgesics market size is expected to reach \$ 2556 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Migraine-Specific Analgesics are a class of targeted medications used for the acute treatment of migraine attacks, designed specifically to relieve migraine pain and associated symptoms by acting on migraine-related neurovascular pathways. Unlike conventional analgesics, these drugs are developed specifically for migraine pathophysiology. Major commercial categories include triptan drugs, ergot alkaloids, and calcitonin gene-related peptide (CGRP) receptor antagonists, with triptans continuing to account for a significant share of the global market. These medications are primarily used for rapid symptom relief during migraine attacks rather than for long-term preventive treatment. Commercial dosage forms include tablets, orally disintegrating tablets, nasal sprays, and subcutaneous injections. On a finished-dose basis, the upstream supply chain mainly includes related APIs, excipients for oral, nasal, and injectable formulations, delivery devices, packaging materials, and finished-dose manufacturing services. Downstream customers mainly include originator and generic marketing authorization holders, hospital pharmacies, retail pharmacy chains, e-prescription fulfillment platforms, pharmaceutical wholesalers, as well as neurology clinics, headache centers, and emergency-care channels. Based on the stable demand for migraine-specific analgesics in global acute migraine management, the continued dominance of oral formulations in the product mix, and the value differences across dosage forms, global nominal capacity of finished Migraine-Specific Analgesics is estimated at about 820 million doses in 2025, with actual sales volume of about 637 million doses and an average ex-factory price of around US\$3.12 per dose. As the market has largely entered a mature stage while certain new-mechanism products still

carry higher value, the overall industry gross margin is typically estimated at 45%-62%.
