Abstracts

The global Milbexime Anthelmintic market size is expected to reach \$ 949.1 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

Similar to other macrolide antiparasitic drugs, milbexime acts as an agonist of GABA (?-aminobutyric acid) neurotransmitter in nerve cells, and can also interact with gluten in nerve and muscle cells of invertebrates Amino acid-gated Cl-channel binding. In both cases, it blocks the parasite's nerve signaling, eventually paralyzing the parasite, causing the muscles to lose their ability to contract, stop feeding, and cause the parasite to die. Milbexime also affects the reproductive activity of some parasites by reducing oviposition or inducing abnormal egg production.
