Abstracts

According to our (Global Info Research) latest study, the global Military Electro-Optics & Infrared (EO-IR) Systems market size was valued at USD 7717.1 million in 2022 and is forecast to a readjusted size of USD 10040 million by 2029 with a CAGR of 3.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The changing nature of modern warfare is driving the growing need for ISR capabilities. Military forces are increasingly facing asymmetric threats, such as terrorism and insurgency, which require accurate and reliable intelligence to identify and neutralize potential threats. Additionally, militaries are increasingly operating in urban environments where traditional ISR approaches may not be effective. In these environments, EO/IR sensors can provide valuable intelligence by detecting and tracking potential threats in real time. The need for ISR capabilities is also driven by the need to improve the efficiency of military operations. Accurate and reliable intelligence helps reduce the risks associated with military operations and improves decision-making in critical situations.

The military requires reliable and accurate intelligence, surveillance and reconnaissance (ISR) capabilities to gather critical information about enemy forces, terrain and other aspects of the battlefield. This information is critical to determining the best course of action for military operations and assessing the effectiveness of those operations. EOIR sensors are an important part of ISR capabilities because they provide real-time situational awareness and surveillance capabilities. EO/IR sensors can detect, track and identify potential threats in various light and weather conditions, providing critical information for military operations.
