## Abstracts

The global Military Electronic Non-Steerable Antennas market size is expected to reach \$ 796.9 million by 2029, rising at a market growth of 6.6% CAGR during the forecast period (2023-2029).

The modernization of legacy radio systems is a key priority for defense forces worldwide. Many military organizations are using outdated radio systems that may not be able to keep up with the demands of modern warfare and may be vulnerable to jamming or interception by adversaries. There are several drivers for the modernization of legacy radio systems. One of the main drivers is the need for interoperability between military organizations and allied forces. Modern radio systems often use digital signal processing and other advanced technologies to provide secure communications, encryption and other critical functions for military operations. Another driver of modernization is the need to improve situational awareness. Modern radio systems can provide real-time information on the location and status of friendly and enemy forces, which is critical to effective decision-making in the field. They can also be integrated with other systems, such as GPS and unmanned aerial vehicles (UAVs), to provide a more comprehensive picture of the battlefield.

A military non-steerable antenna is an antenna system used by the military for communication, surveillance, and other purposes that does not have the ability to mechanically adjust its direction or orientation. Unlike steerable antennas that can be physically pointed towards a specific target or direction, non-steerable antennas have a fixed position and coverage area.
