Abstracts

The global Military Mast market size is expected to reach \$ 430 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Military Mast are deployable payload-elevation and structural-support systems designed for land-based defence and military operations. They raise communications antennas, radar sensors, electro-optical and infrared equipment, electronic-warfare systems, signals-intelligence payloads and other mission equipment to a specified operating height through sectional assembly, nested telescoping, manual push-up, winch-driven, pneumatic, electromechanical, hydraulic or reelable-composite mechanisms. A complete system typically comprises the load-bearing mast structure, elevation drive, locking and braking mechanisms, control unit, stabilisation equipment, payload interface, cable-management arrangement and installation components for dismounted, ground-based, vehicle, shelter, trailer or skid-mounted deployment. The principal function is to improve line-of-sight communications and sensor coverage, reduce obstruction caused by terrain or surrounding structures, and enable rapid deployment, stable operation, recovery and relocation under demanding field conditions.

Will-Burt leverages its multi-brand portfolio and geographically diversified manufacturing footprint to cover pneumatic, mechanical, portable, mobile-tower and trailer-mounted mast systems. Mastsystem and Comrod have established strong installed bases and broad product coverage in composite masts and tactical communications applications, while SMAG and FALCK-SCHMIDT compete in higher-value projects through high-payload capacity, low-deflection performance and complex platform-integration capabilities.

Will-Burt's principal strengths lie in the breadth of its product portfolio, its group-level

integration capabilities and its global service network. Its acquisitions of GEROH, Aluma Tower and Clark Masts have expanded the group's coverage across mechanical, pneumatic, sectional, mobile-tower and trailer-integrated systems, while also strengthening its local manufacturing presence in both Europe and North America. Mastsystem benefits from a high concentration of revenue in tactical mast systems, extensive composite-material expertise and a substantial global installed base; Lagercrantz expects the company to generate annual revenue of approximately EUR 20 million. Comrod, meanwhile, combines mast systems with tactical antennas, control systems and automatic payload-alignment capabilities, offering products ranging from man-portable sectional masts to heavy-duty motorised systems.
