## Abstracts

According to our (Global Info Research) latest study, the global Milk Alternatives market size was valued at USD 9793.2 million in 2023 and is forecast to a readjusted size of USD 15910 million by 2030 with a CAGR of 7.2% during review period.

A “milk alternative” is any alternative liquid that replaces milk in a diet or recipe.

Almond milk may be all the rage these days, but it’s nothing new. In fact, almond milk has been around since the Middle Ages. A mixture of ground almond and water (so simple, you can make it at home!), almond milk is naturally low in calories. Almonds are high in vitamin E, manganese, selenium, magnesium, potassium, zinc, iron, fiber, phosphorous and boast the highest levels of calcium out of all the nuts. That’s quite the resum?! While other forms of milk need to be fortified with vitamins (including cow’s milk), almond milk is naturally chock full of nutrients. It is, however, also supplemented with calcium, but in doing so, it serves up more of the bone-building mineral than cow’s milk per serving!
