Abstracts

Milking robots, also known as robotic milking machines, automatic milking systems (AMS) or voluntary milking systems (VMS), were developed in the late 20th century. They have been commercially available since the early 1990s. The core of such systems that allows complete automation of the milking process is a type of agricultural robot. Common systems rely on the use of computers and special herd management software. The milking robot consist of a master control computer, milking robot, milking equipment, import and export control system, cow individual identification device. With the milking robot, it is possible to supply an individual cow with all her needs for an optimal health, production and well-being, without the extra labor. The basis of successful dairy farming is the healthy and happy individual cow.

Scope of the Report:

This report focuses on the Milking Robots in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global milking robots industry mainly concentrates in Europe. The global leading players in this market are Lely and DeLaval, which total revenue is \$783.41 million, accounts for 75.45% of total production value in 2015.

A growing lack of high-quality, affordable labor, in combination with the demand for higher efficiency, lower costs and flexible lifestyles, has created a new category for robotic milking and other automated systems on dairies.
