According to our (Global Info Research) latest study, the global Millimeter Wave AiP Module market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The millimeter-wave AiP module is an integrated module of high-frequency communication technology, usually used in wireless communication equipment and radio frequency (RF) systems.

AiP is the first choice for the current 5G millimeter wave mobile phone antenna packaging solution. The current main antenna integration solutions are AoC and AiP. The AoC solution is to integrate the antenna and other circuits on the same chip, which has a high degree of integration, but the cost is relatively high; AiP The solution is to package the antenna array, RF chip, power management chip and connector into a module, which reduces the distance between the RF IC and the antenna array. It is the preferred solution at the current stage after measuring performance, product volume and cost.
