According to our (Global Info Research) latest study, the global Millimeter Wave Circulators market size was valued at US\$ 48.3 million in 2024 and is forecast to a readjusted size of USD 63.4 million by 2031 with a CAGR of 3.2% during review period.

The millimeter wave circulator is a millimeter wave device based on the Faraday rotation effect. Its main function is to achieve the distribution, synthesis and balance of radio frequency signals. The millimeter wave circulator is a multi-port device, usually a three-port device. It uses the gyromagnetic properties of ferrite materials to transmit electromagnetic waves along a certain circular direction, thereby realizing the function of unidirectional transmission of high-frequency signal energy.
