The global Milling Machine Chuck market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A milling machine chuck is a specialized tool holder designed for securing various cutting tools, such as end mills and drills, to the spindle of machining centers or milling machines. These chucks come in different types, tailored for specific applications, ranging from heavy-duty to light-duty cutting, and are selected based on the machining center's design and the machining task at hand. Some milling machine chucks feature two or three-sided contact surface restraints to minimize displacement caused by high-speed spindle rotation, enhancing precision during operations.
