The MIM folding screen hinge is an innovative hinge structure manufactured using the metal injection molding (MIM) process and is used in folding screen devices. Through its unique teardrop or U-shaped design, it can provide a larger bending radius when the device is folded, thereby reducing screen creases and allowing the screen to fold more smoothly. The teardrop-shaped hinge disperses the folding pressure with a curved path similar to the shape of a teardrop, while the U-shaped hinge presents a traditional U-shaped bend. The goal of both is to improve the durability and user experience of folding screen mobile phones.
