## Abstracts

The global MIM (Metal Injection Molding) Furnace market size is expected to reach \$ 51.89 million by 2032, rising at a market growth of 2.6% CAGR during the forecast period (2026-2032).

MIM (metal injection molding) is a metalworking process by which finely-powdered metal is mixed with a measured amount of binder material to comprise a 'feedstock' capable of being handled by plastic processing equipment through a process known as injection molding.

Sintering is the process of compacting and forming a solid mass of material by heat or pressure without melting it to the point of liquefaction.

MIM (metal injection molding) requires the use of MIM (Metal Injection Molding) furnace to complete the sintering process.

Cremer and Shimadzu are the top 2 players of MIM (Metal Injection Molding) Furnace, with about 18% market shares.
