Abstracts

In the process of industrial mining, flammable, toxic and harmful gases will be produced, and their appearance will cause explosions and personal poisoning casualties, which seriously endanger the personal safety of workers and surrounding people. How to effectively and accurately monitor the safety of the working environment has become the key. At the same time, with the increasing demand of current environmental monitoring, it is very important to develop a multi-functional environmental detection equipment. According to the actual needs, a multi-gas concentration detection integrating mobile detection, wireless data transmission and remote monitoring is proposed. The system consists of three parts: portable terminal detector, wireless transmission system and host computer system.
