Mineral balls are small, spherical pellets made from natural minerals such as tourmaline, maifanite, germanium, zeolite, or clay, and are commonly used in water purification, health care, and beauty applications. These balls are typically manufactured by mixing powdered minerals with binders, then forming and firing them at high temperatures. Their porous structure and mineral content allow them to release beneficial ions, adjust pH, remove impurities, and add essential trace elements to water. Mineral balls are widely used in alkaline water filters, spa treatments, washing machine filters, and even foot detox therapies due to their natural ion-exchange and adsorption properties.
