## Abstracts

The global Mineral Exploration Service market size is expected to reach \$ 11670 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Mineral exploration services refer to a series of technical and engineering services provided by professional institutions surrounding the discovery and assessment of mineral resources. These services primarily include geological surveys, geophysical exploration, geochemical analysis, remote sensing interpretation, drilling and sampling, resource modeling, and economic evaluation. The core objective is to identify the location, size, grade, and occurrence conditions of commercially viable ore bodies, either on the surface or underground, providing a scientific basis for mining companies' investment decisions, mine development design, and resource reserve certification. These services are typically provided jointly by professional drilling companies, geological consulting firms, testing laboratories, and integrated mining technology service providers. This is the most risky but also the most technology-intensive link in the upstream mining development chain.

With the global energy transition and the rapid development of the electric vehicle and energy storage industries, the demand for key minerals such as lithium, nickel, cobalt, copper, and rare earth elements continues to grow, driving the mineral exploration services industry into a new upward cycle. Simultaneously, the gradual depletion of high-grade deposits forces mining companies to shift towards deeper, lower-grade, and complex geological areas, further increasing their reliance on high-precision geophysical, AI-based prospecting, and deep drilling technologies. Furthermore, increasingly stringent green mining and ESG regulations are making exploration processes more reliant on digital and low-environmental-impact technologies. The

future industry will see a trend towards integrated development of AI, remote sensing, and deep drilling, leading to increased market concentration. Global leading drilling and testing companies will continue to expand their market share, and the overall industry will maintain stable growth.
