According to our (Global Info Research) latest study, the global Mineral Flotation Collector market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Mineral flotation collector is a flotation agent that can change the hydrophobicity of the mineral surface and make the floating mineral particles adhere to the bubbles. It is one of the most important agents in the flotation process. It selectively adsorbs on the mineral surface and increases the hydrophobicity of the mineral surface, thereby enhancing the adhesion of mineral particles on the bubbles and improving the floatability of the mineral, ultimately achieving effective separation and recovery of the mineral.
