Mineral wool can be defined as a non-metallic inorganic product, which is manufactured by stone and rock along with blast furnace or steel slags. The remaining 2% to 3% organic content in the product is generally a thermo setting resin binder and a small quantity of oil. Rock material and two slag materials are melted in the surface at approximately 1500°C while manufacturing mineral wool for acoustic insulation. Among the common insulation materials, mineral wool manufactured from rock and slag or together with glass wool is one of the best performers in acoustic insulation.
