Mineral Wool Insulation, also known as mineral wool insulation products (or mineral wool insulation materials), is a thermal insulation and sound insulation material commonly used in buildings. This insulation product is mainly made of mineral wool, which can be derived from recycled slag materials, such as blast furnace slag. In some products, the recycling rate of mineral wool can be as high as 90%.

Mineral wool insulation products have good thermal insulation performance and sound insulation effect. They are widely used in commercial buildings and industrial facilities to improve energy efficiency, improve indoor air quality, and reduce greenhouse gas emissions. In addition, mineral wool insulation products also help buildings obtain green building certifications, such as LEED certification, and contribute green points to buildings in many aspects (such as energy and atmosphere, materials and resources, indoor environmental quality, innovation and design).
