According to our (Global Info Research) latest study, the global Mini LED Backlight Chips market size was valued at US\$ 243 million in 2025 and is forecast to a readjusted size of US\$ 430 million by 2032 with a CAGR of 8.5% during review period.

In 2025, global Mini LED Backlight Chips production reached approximately 51428 M Units, with an average global market price of around 4.6 USD per K Units.

Mini LED backlight chips refer to micron-sized light-emitting diode chips with a physical size between traditional LEDs and Micro LEDs, typically ranging from 100 μ m to 300 μ m. They belong to a new generation of highly integrated and reliable semiconductor optoelectronic devices, usually arranged in a high-density matrix, enabling precise brightness and color control. They possess the mature and stable advantages of traditional LEDs while approaching the display effect of Micro LEDs. Primarily used as backlight sources, they are widely applied in automotive, display, and consumer electronics fields, and are a core component supporting the upgrade of high-end LCD backlights.

Mini LED Backlight Chips, leveraging their micron-level size and ultra-high-density local dimming capabilities, precisely address the image quality pain points of traditional LCDs, such as insufficient backlight contrast, limited brightness, halo, and light leakage. They also offer greater stability and long-term reliability compared to OLEDs, providing a mature and feasible differentiated solution for high-end displays. Driven by consumer upgrades, expanding demand in automotive and professional display scenarios, and cost reductions due to a mature supply chain, the industry is entering a critical phase of transitioning from high-end penetration to mainstream adoption. Future development will

focus on technological iteration, in-depth application scenario development, and ecosystem improvement, making it one of the core engines for the upgrading of the display industry.

The upstream raw materials for Mini LED Backlight Chips mainly include substrate materials (silicon substrates, silicon carbide substrates), precursor materials, sputtering targets, etc. Typical raw material suppliers include Cree, II-VI Advanced Materials, TankeBlue Semiconductor, Jiangsu Yoke Technology, Kinglandgroup, Konfoong Materials International, etc. Downstream users are mainly packaging plants and backlight module manufacturers, with typical users including Refond Optoelectronics and Shenzhen Longli Tech.

Mini LED Backlight Chips production capacity varies considerably depending on factors such as substrate size, chip process complexity, product specification switching, and equipment utilization rate, with industry gross margins ranging from 30% to 40%.
