Abstracts

The global Mini LED Photoelectric Panel market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Mini LED backlight industry chain was born out of the traditional LED backlight industry and is an upgrade of the traditional LED backlight industry. In the Mini LED era, the miniaturization of chips has increased the difficulty of packaging and promoted the development of different packaging technologies. SMD, IMD, COB, COG (Chip On Glass) and other routes are in full bloom. Flip-chip COB is expected to become the mainstream packaging method of Mini LED. From the observation of the progress of product launch on the market, major manufacturers at home and abroad continue to launch new Mini LED backlight products, and the promoters cover machine manufacturers and LCD display manufacturers. Mini LED backlight has become a consensus in the innovative development of the display industry.

At present, manufacturers related to upstream chips, midstream packaging, and downstream display in the industry chain have deployed Mini LEDs one after another. Mini LEDs are gradually becoming mature in terms of production capacity, technology, and products, and the mass production process of Mini LEDs continues to accelerate. Midstream packaging companies (especially leading companies with core backlight technology) are expected to benefit from the mini backlight packaging market.

Mini LED backlight packaging is an LED technology that uses smaller LED chips than traditional LEDs to achieve higher brightness, better contrast, more precise local dimming, and a wider color gamut.
