## Abstracts

The global Mini & Micro LED Glass Substrates market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Currently, Mini LED displays are widely favored in markets such as TVs, IT displays, and automobiles. Statistics show that the global Mini LED market will grow to US\$2.32 billion by 2024, and US\$5.9 billion by 2025, with a compound annual growth rate of 86.6% from 2019 to 2025, of which Mini LED backlights will contribute the main market revenue.

Under the condition that the terminal needs to be continuously improved, the Mini LED display technology is also changing. Previously, Mini LED display panels mainly used PCB or FPC substrates, which are inherited from the LED backlight industry, so the technology is relatively mature. However, as a kind of LCD panel, Mini LED backlight technology is under great pressure to reduce costs brought about by Wang's law, and small-pitch LEDs require a better substrate platform. Therefore, the industry is currently focusing on glass substrates commonly used in traditional LCDs. .

Mini/Micro LED glass substrates refer to specialized glass materials used as the foundation for mounting and arranging Miniature Light-Emitting Diodes (Mini LEDs) or Micro LEDs in advanced display technology.

The flatness of the glass-based panel is better, the process precision is higher, and the coefficient of thermal conductivity is 6 times that of traditional PCB materials.
