A Mini Polishing Machine is a small-scale polishing machine typically used for manual or semi-automatic surface grinding and polishing of parts of different materials, shapes, and sizes. It typically consists of an electric motor, a grinding disc, and a grinding head that uses sandpaper or polishing discs close to the surface of the workpiece to achieve the required level of grinding and surface treatment.

The Mini Polishing Machine is primarily used to achieve efficient and refined surface grinding and polishing to enhance the appearance quality, dimensional accuracy, friction, and corrosion resistance of parts. Due to its compact size, simple operation, and ease of mobility, it is widely used in ordinary households, personal studios, and small-scale manufacturing businesses. The application scope of the Mini Polishing Machine is extensive, including the surface treatment and grinding of parts of various types and shapes such as metal products, plastic products, and ceramic products. In addition, it is also widely used in the production and processing of accessories in fields such as watches, glasses, and jewelry.
