According to our (Global Info Research) latest study, the global Mini Split Air Conditioners market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Mini-split air conditioners, also known as ductless air conditioners, are cooling systems that consist of an outdoor condenser unit and one or more indoor air-handling units. They are called 'mini-splits' because they are smaller and more compact compared to traditional central air conditioning systems.

Mini-split air conditioners are known for their energy efficiency. They use inverter technology, which allows the compressor to adjust its speed based on the cooling needs. This results in energy savings and better efficiency compared to traditional air conditioners. Mini-split air conditioners offer more flexibility in installation compared to central air conditioning systems. They do not require a complex ductwork system, making them suitable for homes that lack existing ducts or have limited space for installation.
