## Abstracts

According to our (Global Info Research) latest study, the global Mini Vise market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A mini vise is the smallest type of vise. 'Vises' are tools used to hold workpieces in place during operations and are used in various machining operations. Mini vises are mainly used for manual processing and can be purchased at 100-yen stores. Vises themselves are made of a wide range of materials, from metal to resin, and each material has different holding power.

Mini vises are used to secure objects during processes such as sanding and cutting. Although not necessary if the work can be done by hand, they are indispensable when work cannot be performed by hand, such as when working with high-speed rotating equipment. Since the vise only holds the workpiece itself, it must be firmly attached to the worktable using screws or clamps during actual use. Mini vises are the smaller of the two and are mainly used for manual processing.

This report is a detailed and comprehensive analysis for global Mini Vise market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
