## Abstracts

According to our (Global Info Research) latest study, the global Miniature Medical Endoscopic Camera Modules market size was valued at US\$ 453 million in 2025 and is forecast to a readjusted size of US\$ 939 million by 2032 with a CAGR of 10.8% during review period.

In 2025, global sales volume of Miniature Medical Endoscopic Camera Modules is estimated at approximately 9,800 K Units, with an average price of around US\$44.9 per unit. Miniature Medical Endoscopic Camera Modules are compact imaging subassemblies used in medical endoscopes, catheter based imaging devices, capsule endoscopes and other miniature medical visualization instruments. These modules typically integrate a CMOS image sensor, micro lens, packaging structure, flexible circuit, ultra fine cable, connector and essential signal transmission components. By using miniaturized packaging, low power imaging, proximal or distal integration, and digital or analog signal output technologies, these products enable real time image acquisition inside body cavities, organs, tissue spaces and minimally invasive operating fields, providing core visual input for diagnostic examination, interventional treatment, single use endoscopes, reusable electronic endoscopes, capsule endoscopes and small diameter medical devices.

From a competitive perspective, the global market is still led by companies in the United States, Europe and Japan, including OMNIVISION, ams OSRAM, Precision Optics, Sunex, OptaSensor, SCH?LLY, Br?tsch Technology and i-PRO. These companies have relatively strong capabilities in sensor level integration, micro optics, Chip on Tip architecture, cable connected assemblies and medical grade module manufacturing. Mainland China and Taiwan based companies are also moving quickly into the

segment, with players such as Gpixel, Guangzhou Weishi Guangdian Yiliao Keji Youxian Gongsi, Shenzhen Ojos Medical, Dongguan Quanshi Optoelectronic Technology, Guangzhou Sincere Information Technology, Hubei Sanyingxing, Shenzhen OVS, Medimaging Integrated Solution and Aitronics building product capabilities in micro camera modules, endoscope components, distal tip assemblies, board level solutions and single use endoscope supply chains. Given the high level of customization, long customer qualification cycles and limited revenue disclosure in this market, competitive assessment should not rely solely on reported sales. Product miniaturization, medical application evidence, OEM capability, production stability and downstream customer access are more important indicators. Looking ahead, market growth will be mainly supported by the expansion of single use endoscopes, the development of small diameter interventional devices, wider adoption of capsule endoscopy and continued upgrades toward HD imaging, 3D visualization, fluorescence imaging and low power operation. Compared with the complete endoscope systems market, this segment is smaller in absolute size, but it carries stronger technology value and strategic supply chain importance. Companies with capabilities in miniaturized CMOS sensors, wafer level packaging, micro optical design, ultra fine cable assembly, medical grade manufacturing and customized delivery are expected to capture faster growth as single use endoscopes and minimally invasive visualization devices expand. In contrast, suppliers that only have general camera module capabilities but lack medical grade validation and stable customer adoption are more likely to remain in the extended supplier pool or low end customization market.
