A miniature piston pump is a type of positive displacement pump that is designed to be compact in size. It consists of a piston and cylinder arrangement, where the piston moves back and forth within the cylinder to create suction and discharge pressure. These pumps are commonly used in applications where small volumes of liquid or gas need to be moved, such as in medical devices, analytical instruments, and miniaturized hydraulic systems. The compact size and precise control of these pumps make them suitable for various applications where space and accuracy are important factors.
