Minimalist barefoot shoes are footwear designed to mimic the experience of walking barefoot while offering basic protection for the feet. They typically have thin, flexible soles that allow for natural foot movement and sensory feedback, wide toe boxes to let toes splay naturally, and little to no arch support or cushioning to encourage a more natural gait. These shoes aim to strengthen foot muscles, improve balance, and promote better posture by allowing the feet to move as they would without traditional, rigid shoes. They are popular among those seeking a more natural walking or running experience.
