The minimum pressure valve of a screw air compressor is a crucial control component installed at the outlet above the oil-gas separator. Its main function is to rapidly establish the internal pressure required for lubricating oil circulation during startup, protect the oil-gas separator filter element, and prevent backflow of gas during shutdown. Composed of a valve body, valve core, and spring, it is a key component ensuring proper lubrication of the air compressor and reducing oil consumption.

Upstream suppliers primarily provide basic materials and precision components. Core materials include aluminum alloy or stainless steel castings, high-performance compression springs, and high-temperature resistant, oil-corrosion-resistant fluororubber or PTFE seals. Global sales are projected to reach approximately 800,000 units in 2025, with a market price of around \$120-335 per unit. The industry's gross profit margin is around 30%-40%.
