Abstracts

The global Mining Anchors market size is expected to reach \$ 5818 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of mining anchors reached 1.2 million tons, with an average selling price of 3,200 yuan/ton. Mining anchors are support components used for reinforcing surrounding rock in mine roadways and underground engineering projects. They enhance stability by anchoring the surrounding rock and the support structure together. Main types include resin anchors, mechanical anchors, and self-drilling anchors, widely used in coal mines, metal mines, and tunnel engineering. Global total production capacity is approximately 1.5 million tons, with an average gross profit margin of about 28%. Total industry consumption is approximately 1.2 million tons, roughly in balance with production. Regional demand is concentrated in mining areas in China, Australia, and South America. Upstream demand mainly consists of special steel, alloy steel, resin coils, and galvanized materials, while downstream consumption is concentrated in coal mining, subway tunnels, and water conservancy projects. Demand is driven by investment in mine safety and infrastructure expansion, and future development will focus on high-strength, corrosion-resistant, and intelligent monitoring anchoring systems. Intelligent and integrated installation will be the main business opportunities.
