Abstracts

The global Mining Automation market size is expected to reach \$ 4501 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Automated mining involves the removal of human labor from the mining process. The mining industry is in the transition towards automation. It can still require a large amount of human capital, particularly in the developing world where labor costs are low so there is less incentive for increasing efficiency. Automated mining is an umbrella term that refers to two types of technology. The first type of mining automation deals with process and software automation; the second type deals with applying robotic technology to mining vehicles and equipment.
