Automated mining involves the removal of human labor from the mining process. The mining industry is in the transition towards automation. It can still require a large amount of human capital, particularly in the developing world where labor costs are low so there is less incentive for increasing efficiency. Automated mining is an umbrella term that refers to two types of technology. The first type of mining automation deals with process and software automation; the second type deals with applying robotic technology to mining vehicles and equipment.

According to our (Global Info Research) latest study, the global Mining Automation Systems market size was valued at USD 3054.4 million in 2022 and is forecast to a readjusted size of USD 3797.1 million by 2029 with a CAGR of 3.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
