According to our (Global Info Research) latest study, the global Mining Explosion-proof Infrared Camera market size was valued at US\$ 38.59 million in 2025 and is forecast to a readjusted size of US\$ 62.18 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global sales of Mining Explosion-proof Infrared Camera reached 3,850 units, with an average selling price of US\$9,750 per unit. Total production capacity was approximately 4,500 units per year, and gross profit margin remained between 32% and 37%. This product mainly consists of an explosion-proof housing, a high-sensitivity infrared sensor, a high-definition image processing module, a low-temperature heating device, a power supply, and a data interface. It is specifically designed for high-risk environments such as coal mines, metal mines, and underground mines, featuring explosion-proof, dustproof, waterproof, and low-light infrared monitoring capabilities, enabling real-time monitoring and safety management of personnel, equipment, and the environment in mines. Upstream raw materials include explosion-proof housing steel, infrared sensors and optical lenses, electronic processing modules, and control systems. Downstream suppliers primarily include mining companies, underground construction projects, and safety monitoring service providers. With increasingly stringent safety regulations in the mining industry and the advancement of smart mines and automated monitoring systems, the demand for infrared cameras with high reliability, excellent explosion-proof performance, strong night vision, and remote monitoring capabilities continues to grow. Future development will focus on improving imaging accuracy, intelligent analysis and alarm functions, remote data transmission, and modular customization to meet the needs of complex mining environments and safety management, thereby expanding market share and technological

competitiveness.
