According to our (Global Info Research) latest study, the global Mining Pool Services market size was valued at US\$ 1029 million in 2025 and is forecast to a readjusted size of US\$ 1980 million by 2032 with a CAGR of 9.8% during review period.

Mining Pool Services are centralized or decentralized platforms provided by operators that aggregate the computational power (hashrate) of numerous individual miners into a single logical unit. Its core function is to deconstruct high-difficulty blockchain mining targets into smaller, manageable 'shares' distributed via protocols like Stratum V2. This service effectively mitigates the income volatility (variance) inherent in solo mining through a 'revenue smoothing' mechanism. Beyond task coordination and hashrate validation, the pool acts as a financial clearinghouse, distributing block subsidies and transaction fees according to specific payout schemes such as FPPS or PPLNS.
