According to our (Global Info Research) latest study, the global Mining Rock Drilling Jumbo market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Mining Rock Drilling Jumbo is a heavy-duty piece of mining equipment designed for underground excavation and drilling operations in mines and tunnels. It consists of a powerful drilling rig mounted on a movable carriage or boom, equipped with multiple drilling booms or arms. These booms are used to simultaneously drill holes into rock surfaces for blasting or support purposes. Mining jumbos are vital for increasing the efficiency and safety of underground mining operations, as they can access hard-to-reach areas and provide precise drilling while protecting miners from potential rockfall and hazardous conditions.

The industry trend for Mining Rock Drilling Jumbos is driven by the continuous growth of underground mining activities worldwide. As ore bodies become deeper and more challenging to access, the demand for efficient and automated drilling solutions like jumbos has increased. These machines are evolving with advanced automation, remote control, and data monitoring capabilities to enhance safety and productivity. Furthermore, the focus on sustainability and environmental responsibility in mining operations has led to the development of eco-friendly and energy-efficient jumbo models, aligning with industry demands for improved resource utilization and reduced emissions.
