Mining specific saw blades are essential tools in the mining process, mainly used for cutting and slotting hard materials such as ores and rocks. Diamond saw blades are suitable for mining hard ores such as limestone, granite, and marble. The hardness of diamond saw blades can cope with the high hardness of these ores, maintaining cutting efficiency and blade life. Hard alloy saw blades are suitable for mining medium hardness ores such as coal mines, iron ores, and copper ores. Hard alloy saw blades can maintain good stability and durability during the cutting process of these ores. Suitable for mining low hardness ores such as gypsum, limestone, and iron sulfide. The cutting performance and cost-effectiveness of high-speed steel saw blades have been well demonstrated in the mining of these ores.
